RESEARCH:

Trust and Reputation in Distributed Systems
The recruited candidate will join the DRIM (Distributed Systems, Information Retrieval, Mobility) of the LIRIS-UMR CNRS 5205 Laboratory.

We are looking for candidates with an excellent academic profile and a research project in the field of trust and reputation in distributed systems. Special attention will be paid to projects with an emphasis on privacy preservation in trust/reputation systems, on the exploitation of social interactions and relationship in the assessment of trust/reputation values, and on the management of trust in B2B partnership.

The recruited person will have to commit her/himself to the development of multidisciplinary partnership within the framework of the Lyon “Laboratoire d’Excellence” (LabEx) "Urban Worlds Intelligence" (IMU) and in the development of international partnership, esp. within the international doctoral college "Multimedia, Distributed and Pervasive Secure systems - MDPS " that is led by the team.

TEACHING:

Software Engineering
The Department of Computer Science aims at recruiting an assistant professor whom expertise field covers the teaching of software engineering and software quality. The department particularly expects that the applicant demonstrate the capacity :
- to teach fundamentals on software engineering and quality
- to teach how to efficiently use software life cycles methodologies and approaches
- to manage software development projects

The applicant should have a solid background in the field of complex system programming and software safety.

The assistant professor will join the teaching team “Software Development” (“Développement Logiciel”).

Soft skills are also expected in order to facilitate the integration with the department.
